

Client: **avis budget group**

Project: Avis Budget Group EMEA Phase 1 European Rollout

Value:

### Project brief:

Following a change of ownership in 2012, ABG underwent a transformation in the way that it conducted its operations within Europe. As part of this transformation they implemented a programme of security upgrades across the UK and mainland Europe and were looking to select a supplier to provide technology based security guarding solutions for Phase 1. This consisted of 6 sites in mainland Europe (Italy x 3, France, Spain x 2) to be rolled out during 2013.

Phase 2, will look at a further programme of site upgrades to be completed in 2014/15.

The security required would enable the ABG EMEA Security team to remotely view their systems and therefore remove the requirement for manned guarding whilst still ensuring all assets are not only protected, but also

Digi Security was selected for the project as they offered the best overall solution with a low cost of ownership.

The system has proved a success and we are now starting looking toward phase 2.

### Clients benefits:

Digi Security provided a solution that allows

- Drastic reduction of site staffing costs by eliminating the need for man guards
- Strengthened security and site management capabilities
- Full data logs and system reporting on security and site operations (Access Control, ANPR)
- Full remote viewing and play back capabilities (CCTV)
- Remote diagnostics, software upgrades and system support from in-house engineering & technical teams
- Ongoing consultancy services

### Our Solution:

Digi Security provided ABG with a truly integrated solution across the EMEA sites. Prior to installation Digi worked closely with the client to understand site dynamics, daily operations and staff cultures. The systems are cross integrated meaning that all devices not only talk to the front end solution but can interlink between each other providing a truly resilient security solution that has the capability of a modular expansion roll out.

The integration will include, but is not limited to, the following:-

- Networked Access control
- 1080p HD CCTV
- Monitoring
- ANPR
- Barriers and bollards with traffic lights
- IP Tannoys and intercoms
- Remote Support

## Systems:

- Access Control Systems
- CCTV Systems
- Door Entry & Intercom Systems
- Intruder Alarm Systems
- Nurse & Warden Call Systems
- Communal Aerial Systems
- Vehicle Barrier Controls
- Internal Barrier Controls
- Front End System Integration  
(Security Management Systems)
- Transmission Systems (wireless/  
copper / fibre / Ethernet)

## Systems Services:

- System design including CAD
- Workshop test & pre-build facilities for FATs
- Bespoke software for complicated system integration
- Project management
- Full installation works
- Full system commissioning / configuration / witness testing to point of project handover
- Customer / system operator training
- O&M documentation
- Full maintenance & service provision
- 24/7 call centre
- Account Management & Customer Aftercare
